

A long-exposure photograph of a road at night, showing light trails from vehicles. The trails are primarily yellow and white, curving into the distance. A prominent red light trail is visible on the left side of the road. The background is a dark, clear night sky.

Automotive connectivity

And the potential from dynamic spectrum access to TV White Spaces

We expect to be connected wherever we are

- High penetration of smart mobile devices and growing use of online services for a wide range of applications
- Travel can be more enjoyable and productive
- Even when there are inevitable delays, stress can be reduced by timely access to reliable information on the cause of the problem, likely extent of the delay – and alternative travel options

Full range of connection applications

- Internet access
- Personal communications
- Cloud-based vehicle management
- Vehicle to vehicle
 - Collision avoidance etc.
 - Mesh networking – to extend coverage
- Vehicle to infrastructure
 - Traffic updates, local services, news, downloads
 - Access to Internet services

Not everywhere enjoys good connectivity

Forest Fire Fighting example

- Ad-hoc networking is an essential tool
- Efficient operation under a range of conditions
- Sharing available backhaul

Mobile ad-hoc networking delivers effective and resilient crisis communications

Vehicle as info hub during a disaster
